<sup>†</sup> Figures do not include NGLs and oil from nonconventional sources.

\* Includes approximately one-half of Neutral Zone production.

\*\* Includes the UK offshore, Norway, Denmark, The Netherlands offshore, and Germany offshore.

\*\*\* Does not include North Sea.

<sup>1</sup>Includes crude oil, lease condensates, natural gas plant liquids, other hydrocarbons for refinery feedstocks, refinery gains, alcohol, and liquids produced from nonconventional sources.

# Build better reservoir management.

The *FloReg* ICD is insensitive to fluid viscosity, inhibiting water flow while maximizing hydrocarbon recovery.

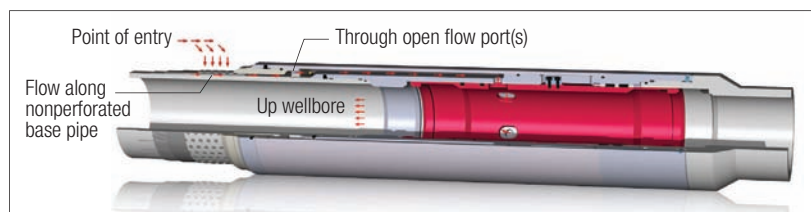

*FloReg* ICDs were installed successfully in more than six Malaysian wells to help Newfield delay early water and gas production as the wells penetrated a thin oil column with an active water aquifer and gas cap.

Solving your sand control challenges.

Extend the life of your well with proven inflow control technology. Weatherford's *FloReg*™ inflow control device (ICD) provides uniform distribution in horizontal and deviated wellbores, greatly delaying or preventing water and gas production for more efficient reservoir drainage. Combined with our high-quality sand screens, the system provides superior sand control, while maximizing production and recovery. For greater functionality, our new *FloReg* RC device incorporates the *FloReg* ICD with Weatherford's advanced sliding screen technology to enable systems to shut off unwanted fluid flow.

Prevent water and gas breakthrough in horizontal or deviated wellbores. For more information on Weatherford's *FloReg* ICD and the new *FloReg* RC technology, visit [weatherford.com](http://weatherford.com).
