

Call for Papers on CO₂ Management

SPE Economics & Management Journal

Are you involved in, or conducting research in, CO₂ management? As one of the most important challenges facing the upstream industry today, this topic will be the subject of a dedicated issue of SPE's newest quarterly online journal slated for July of 2011. *SPE Economics & Management* wants your papers about the practice, policy, and strategy of managing CO₂. Papers could address, for example, management systems developed to achieve emissions reductions, efficiency initiatives designed to reduce CO₂ emissions, development of R&D portfolios targeted at delivering relevant technologies, and deployment of emissions reductions technologies, such as carbon capture and sequestration. Reduction and management strategies are increasingly important as resource awareness, and environmental responsibility, continue to shape the advances of the E&P industry. Share your successes, innovations, and research as we explore the methods of reducing our industry's carbon footprint in this special issue of *SPE Economics & Management*.

Papers exploring these topics should be submitted to <http://mc.manuscriptcentral.com/speem>. More information about the journal can be found at <http://www.spe.org/papers/pubs/EMjournal.php>.

Have a more technical paper about CO₂ capture or sequestration? Consider submitting it to one of SPE's other journals. For more information visit <http://www.spe.org/papers/coverage.php>.
