Reservoir Engineering Software and Services

**Unparalleled
knowledge and experience**

Fekete is an international consulting firm that has been providing integrated reservoir engineering services and software to the oil and gas industry for 35 years.

The strength of our expertise is the interdisciplinary co-operation between Fekete's geological, petrophysical, geophysical, and reservoir engineering staff and the integration of their results to arrive at a **practical and technically rigorous** reservoir interpretation.

We develop software that incorporates the latest in technology; it is **innovative, easy to use**, and provides **practical and advanced solutions** for reservoir engineering and production optimization projects.

No longer do you have to wait for samples to be returned to the surface for analysis. InSitu Family* downhole fluid measurements bring unprecedented accuracy to fluid properties quantification at true reservoir conditions, in real time. And concerns about sample quality are also a thing of the past because focused Quicksilver Probe* fluid extraction assures the acquisition of virtually pure reservoir fluid for measurement.

Fluid Profiling* analysis of InSitu Family measurements gives you further insight to reservoir fluid distribution and variation. You'll understand the compositional distribution of fluids or confirm your assumptions of zonal connectivity with enhanced downhole fluid analysis. Then use multiwell comparisons to describe the lateral variation of fluid systems across an entire field.

Measure and understand fluid density, advanced composition, gas/oil ratio, CO₂, and pH with InSitu Family measurements today. For optimized production tomorrow.
