

Access with Domain Validation

What is Domain validation?

Some companies and universities cannot use IP validation for various reasons. To give them an alternate option OnePetro created a program that will enable users to validate based on the fact that he/she has a valid company/university email address.

How is Domain validation set up in OnePetro?

Users must create a login on OnePetro and register their company (or university) email address to have access to your company/university subscription. This access format requires that users login in order to use the subscription.

How Domain Validation Works:

The following link is posted on the subscriber's intranet site:

<http://www.onepetro.org/mslib/protected/entitlement/RequestEntitlement.jsp>

Once a user has logged in, they will be asked to supply their company (or university) email address. OnePetro will then check the domain name of the email to verify that it is a valid domain. The user is sent a confirmation email to the specified email account with a link to finish the registration process. (The link only remains active for 48). This will confirm that the user has the right to access your company/university subscription based on an valid email account. Users will remain in the "group" for 90 days (typically), at which point a user will need to re-validate that he/she is still enrolled/employed by your institution and has the right to use the domain validation by repeating the process listed above. (a reminder message will be sent to let a user know when to re-validate).

******USERS MUST LOGIN FOR DOMAIN VALIDATION TO BE APPLIED******

INSTRUCTIONS:

Limited (Packaged Download) Subscription Access with Domain validation:

1. Users add selected papers to the cart using the “add to cart” link.
2. USER MUST BE LOGGED IN!
3. User then clicks “View Cart” or “Checkout” and they will see their cart with \$0.00 pricing.
4. User then clicks on “continue” and they will be ask to enter their name and email address.
5. User then confirms order and proceed to the download page.
6. A receipt will be sent to the email address entered in step 3.

***NOTE:** If a user with domain validation never logs in, he/she **will** be charged for the papers in the cart.

The screenshot shows the OnePetro website interface. At the top, the OnePetro logo is on the left, and navigation links for Home, Login, and Contact are on the right. The Login link is circled in orange, with an arrow pointing to a text box that says "Users must log in to obtain subscription pricing". Below the navigation bar is a search results section. The search term is "testing senario" and there are 12 results. The results are displayed in a table with columns for Title, Author, and Relevance. Each result has an "Add to cart" link. The "Add to cart" link for the first result is circled in orange, with an arrow pointing to a text box that says "The user will need to add the paper to their cart. The pricing will display as \$0.00 once they are in the cart." The table also includes "Abstract" links for each result.

Title	Author	Relevance	Abstract	Add to cart
Mathematical Modeling of Gas Kicks in Deep Water Scenario	J.O.L. Nunes, A.C. Bannwart, P.R. Ribeiro, UNICAMP SPE 77253-MS 2002	94.98 %	Abstract	Add to cart
The Effect of Polycrylamide Polymers and Formaldehyde on Selected Strains of Oilfield Related Bacteria	Gale B. Farquhar, Texaco EPTD NACE 96281 1996	93.97 %	Abstract	Add to cart
Enhanced Mechanical Earth Modelling and Wellbore Stability Calculations Using Advanced Sonic Measurements—A Case Study of the HP/HT Kvitebjorn Field in the Norwegian North Sea	Anke S. Wendt, SPE, Marit Kongslien, Bikash K. Sinha, SPE, Badarinadh Vissapragada, SPE, and Adrian Newton, SPE, Schlumberger, and Eiliv Skomedal, Lasse Renlie, and Erik Sandtorv Pedersen, Statoil SPE 109662-MS 2007	93.97 %	Abstract	Add to cart
