Message from the Chairpersons

The 2020 SPE Subsea Well Intervention Symposium is to be held at the Galveston Island Convention Center in Galveston, Texas on 11–13 August 2020. The symposium is the premier opportunity to interact with operators, service partners, regulators, and industry experts from across the globe who are focused on subsea well operations.

Presentations and papers will highlight the unique aspects of subsea interventions, and to deep dive into how structured data driven techniques underpinned by fit for purpose tools and systems can realize safe, reliable and cost-efficient solutions in a complex and dynamic environment.

Under the theme “Predictable Outcomes in a Dynamic Subsea Environment” the committee is now accepting proposals. Share your knowledge on various topics related to subsea well intervention and help us shape the event agenda. Submit your proposal by 26 March 2020. If accepted, as an SPE symposium, authors will be offered, but not required, to submit papers for review and publication.

We look forward to seeing you at the symposium in August!

Matt Weinstock, Chairperson
Shell

Ryan Schmidt, Chairperson
