# SPE Virtual Symposium: CCUS and Contaminants Management

Progressing CCUS and Contaminants Management into Reality

7-9 December 2020 | Virtual

## Sponsorship Opportunities

## Welcome Message

Dear Industry Colleague,

We are pleased to invite you to join SPE's virtual symposium on CCUS and Contaminants Management this 7-9 December 2020.

With rising global demand for clean energy, the need for CCUS technology is vital to the oil and gas industry to capture CO<sub>2</sub> and recycle it for utilisation and storage. Coupled with contaminants management, CCUS has the potential to deliver sustainable environmental benefits, improve reliability, and increase economic viability. These benefits have attracted the support for CCUS from a wide range of stakeholders in recent years.

By going virtual, the inaugural Asia Pacific SPE Virtual Symposium on CCUS and Contaminants Management aims to gather a wide range of audience from around the globe to share key insights on best practices, methods and technological advancements in managing high contaminant assets, including strategies to successfully develop and safeguard their value.

This programme will delve deeper into various case studies including those from mature markets, and provide effective technical solutions for the region to reduce carbon emissions, improve utilisation and disposal of CO<sub>2</sub> using CCUS technologies, compliance towards carbon reduction commitments, and management of contaminants.

We look forward to having you at our virtual symposium this December 2020!

Sincerely,

Noriani Yati Mohamad  
Head, Resource Development &  
Management-Sarawak,  
Malaysia Petroleum Management  
**PETRONAS**

Peerapat Kritanusorn  
Vice President,  
Development Planning  
Department

## About the Symposium

As the energy industry faces challenges in the development of assets with high contaminants, especially those with high CO<sub>2</sub> and H<sub>2</sub>S, Carbon Capture, Utilisation and Storage (CCUS), and contaminants management has become a high priority for operators, service companies, and regulators alike. Advancement in CCUS-related technologies is one of the key areas being considered to spur monetisation of high CO<sub>2</sub> gas fields, from both commercial and technical perspectives.

In line with the commitment to the Paris Agreement on reducing carbon emissions, this event will focus on providing effective solutions that are critical to develop assets with high contaminants and provide new ideas to meet energy goals in the region.
