

SPE MAKES IT'S RETURN TO IN-PERSON WITH IT'S LAUNCH EVENT IN KYIV

Kyiv, Ukraine (29 October 2021) – The Eastern Europe Subsurface Conference, organised by the Society of Petroleum Engineers (SPE) opens its doors for the first-time next month. This is a significant step towards the return of face-to-face events with the support of Host Organisation Naftogaz and other experts from the oil and gas industry in Europe.

After a turbulent couple of years and the 'new norm' of virtual events, people are excited to reconnect with the industry and return to an in-person experience. SPE ensures a smooth transition by creating a safe environment for attendees while complying with governmental guidelines.

This significant regional event will provide an opening ceremony with leading industry figures, two executive level leadership panel sessions covering *'Enhancing the New Investment Opportunities in Eastern Europe & The Black Sea'* and *'Optimising Project Execution: Technologies, Techniques and Talent'*, and two extensive technical streams with 30+ presentations.

Focusing on reservoir characterisation, basin modelling, seismic imaging, field management/optimised recovery (EOR/IOR), digitalisation effects on recovery and asset life cycle management, it will provide world class technical expertise, new exploration concepts and innovative production enhancements and improvements.

Reconnecting E&P professionals and bringing back engagement opportunities is a vital component to the conference with direct interaction with expert speakers as they address the technical challenges facing upstream oil and gas professionals in the region today.

Along with the host Naftogaz, a regional leader in oil & gas exploration and development, and sponsorship support from Expert Petroleum, UNB, Solar Turbines, Schlumberger, Weatherford, Halliburton, Geo Alliance and OMV Petrom, SPE looks set to pave the way for the return of oil & gas events and the reconnection of the industry.
